

ABSTRACT OF THE DISCLOSURE

A clip-on training urinal configured to be clipped onto the rim of a toilet bowl, preferably at the side of the bowl. The training urinal extends downward from the outside of the rim and is in the general shape of a rectangular open-top container having a flat base and an upper open rim. The front wall is cut out to form an opening similar to a urinal which a small boy can reach while standing on the bathroom floor, the opening having a front wall extending down to the base to form a urine reservoir. A side handle is provided to lift the urinal from the toilet bowl rim to empty the urine by pouring it into the toilet bowl.
